MOBILE APP

# DIGITAL SCOUTING MAP

PERSONALIZED DATA CAPTURE

Whether you're a private farm operator, Ag Service Provider, Agronomist, or University Researcher – The CultivateAI Mobile Scouting App allows you and your team to document location-specific, in-field information and record Harvest or Spray records on a mobile phone, in real-time.

This mobile app allows the user to create a scouted record within your personalized form - including user location, photos and notes.  To create harvest and spraying records, this mobile app displays your unique crop types, units and products.  Once the record is complete, it is automatically sent to your organization's data silo to be shared instantly with other employees.

To create your custom scouting app, we will first have a discovery session to learn about your scouting needs and property details.  Then we'll get to work creating your custom scouting input forms for your in-field observations – making your CultivateAI Scouting App simple and tailored to your operation.

## FEATURES:

### DATA STORAGE

• Your Own Data Silo for
  Record Storage & Team Sharing

### BASEMAP LAYERS
